Address
Petra/Wadi Musa, Al-Shamaseen
Ma'an, Jordan

Education

2022
Bachelor of Computer Science
Al-Hussein Bin Talal University
89.03% Excellent

Expertise

- Machine learning
- Computer vision
- Python
- QA
- QC
- Analytics deep learning mode
- Transfer learning and fine tine
- Tensorflow
- PyQt

Language

English

Arabic

Experience

Jan 2022–Current
ShAi Company | Amman

Mentor

I have started my work as mentor in ShAI in machine learning ,Deep learning and Nlp .We create materia for the training and task for trainees after every session. and create projects in kaggle between trainees.

Certificates

- Certificate in AWS Cloud Practitioner Essentials (Second Edition) (Arabic).
6 Hours
- Certificate in digital marketing basics by Google.
40 Hours
- Certificate in Machine Learning with Python by IBM Developer Skills Network.
3 Hours
- Certificate in Artificial Intelligence training workshop in natural language processing by ShAi Company.
10Hours
- Certificate in Artificial Intelligence training workshop in Computer vision by ShAi Company.
10Hours
- Certificate in Artificial Intelligence, Machine learning Deep learning, Computer vision, and natural language processing by ShAi Company.
120 Hours
- Certificate in Kolten (android) by The Hope International Company.
40 Hours
- Certificate in Python and Machine by The Hope International Company.
60 Hours
- Certificate in quality assurance by The Hope International Company.
40 Hours
- Certificate in quality control by Academy Arab International Company.
40 Hours
- Certificate in Deep Learning by ShAi Company.
50Hours

Projects

Graduate Bachelor project
We used the TensorFlow framework to create a Deep Learning model using transfer learning of EfficientNet and training in 4 different lung diseases WIth 97% accuracy. After that, we created the Flutter app and linked it with our model.

Mobile Price Classification
I Build a regression model to predict the price of the phones after visualizing the data and understanding it and trying different algorithms like CatBoostRegressor, RandomForestRegressor, ExtraTreesRegressor, and Ngboost.

Heart Failure Classification
I Built a Classification model to predict If the patient is suffering from a heart attack and try different algorithms like CatBoostRegressor, RandomForestRegressor, XGboost, and Ngboost.

Engineering Placements Classification
I Build A Robust Model Using ML Techniques And Neural Networks, to Predict And Analyze Whether A Student Gets Placed, Based On His/her Background.

Top 100 Most Streamed Songs on Spotify
I have used Python and data visualization skills to explore different data visualization methods, libraries, defining functions, and techniques to manipulate and transform the data to look for correlations between song parameters and their popularity.

Lung cancer
I Build a Classification model to predict If the patient has Lung cancer and try different algorithms like CatBoostRegressor, RandomForestRegressor, XGboost, and Ngboost.

Lung cancer using deep learning
I Build a CNN model to predict If the patient is suffering from Lung cancer and tried different algorithms like BeitBasePatch, Efficient, ResNet, and exception and select the best optimizer for these optimizers SDB, AdaBelief Optimizer, Adagrad, Adadelta, RMSprop, Adam and AdaBound.

Cars price prediction
I Built a Regression model to predict the price of different kinds of cars and try different algorithms like CatBoostRegressor, RandomForestRegressor, XGboost, and Ngboost.

Insurance Premium Prediction
I have Built an Ml model to look into different features to observe relationships, and plot a multiple linear regression based on several features of individuals such as age, physical/family condition, and location against their current medical expenses to be used for predicting future medical expenses of individuals that help medical insurance to make a decision on charging the premium.

Lending Club loans two
I Build a Regression model to predict the Lending club loan and choice the best algorithm from this algorithm CatBoostRegressor, RandomForestRegressor, XGboost, and Ngboost.

X-ray classification using deep learning
I Build a CNN model to predict different x-ray diseases and tried different algorithms like BeitBasePatch, Efficient, ResNet, and exception and select the best optimizer for these optimizers SDB, AdaBelief Optimizer, Adagrad, Adadelta, RMSprop, Adam and AdaBound.

Animal classification using deep learning
I Build a CNN model to Classify 30 different animals and try different algorithms like BeitBasePatch, Efficient, ResNet, and exception and select the best optimizer for these optimizers SDB, AdaBelief Optimizer, Adagrad, Adadelta, RMSprop, Adam and AdaBound.

Multi-label X-ray classification using deep learning
I Build a CNN model to predict different Multi-label x-ray diseases and tried different algorithms like BeitBasePatch, Efficient, ResNet, and exception and select the best optimizer for these optimizers SDB, AdaBelief Optimizer, Adagrad, Adadelta, RMSprop, Adam and AdaBound.

Semantic segmentation Using U-net and keras-unet-collection
I Have created a U-Net semantic segmentation model and used Keras-unet-collection on Lung data, drove data, and self-drive data.
